

TATKAL FLASH

Easy Guide to Ticket Booking (Manual + Bot Hybrid)

How to Book Your Ticket Easily

To make sure the website does not block you, the bot automatically fills all passenger details, but leaves the train reservation class click for you. Follow these simple steps for a successful booking.

What the Bot Does (Automatic)

- Enters from & to stations on the search page.
- Finds your train and scrolls to it.
- Injects all passenger names, ages, and genders instantly.

What You Must Do (Manual)

- Log in with your Password/Captcha if asked.
- **Click on Sleeper/AC and click 'Book Now'.**
- Select your preferred payment method on the form.
- Type the Captcha and complete the payment.

1 Set up Passenger List

USER STEP

Open the Tatkal Flash icon in Chrome, enter credentials, train codes (like YNK and YG), and add the list of passengers. Click **Start Booking**.

2 Log in & Search Setup

BOT + LOG-IN

The bot loads the search page. If you are logged out, enter Captcha. Once logged in, the bot sets stations and initiates the search.

3 Select Class & Book Now

USER ACTION REQUIRED!

This step is manual: The bot scrolls down to the correct train. You must immediately click Sleeper (SL) or AC class, then click **Book Now**. This bypasses IRCTC bot sensors.

4 Passenger Form autofill

BOT AUTOMATION

The bot automatically adds passenger rows, writes the names, ages, genders, and points you to the payment & Captcha blocks.

5 Select Payment, Solve Captcha & Pay

USER STEP

Look at the details, select your preferred payment mode manually, type the Captcha text into the box, click Continue, and complete the transaction.

 **Pro-Tips for Success:**

- Keep the extension dashboard filled in advance so that you don't waste time at Tatkal opening hours (10:00 AM / 11:00 AM).
- If the page gets stuck or hangs, simply refresh (F5 or reload). The bot will automatically pick up where it left off.
- Make sure your UPI app (like GPay, PhonePe, or Paytm) is open on your mobile to accept/pay instantly.
